UNDERSTANDINGS OF THE OWNER

As owner of this building, and by virtue of my signature on the front of this form, I understand:

- 1. That here will be no routine review of the construction plans conducted by the Department of Commerce for this project.
- 2. That there will be no routine inspections conducted by the Department of Commerce during the construction of this project.
- 3. That plan review and/or inspections by the local municipality may be required by local permitting ordinances.
- 4. That the Building if the building is registered then any HVAC submittal (if the building is heated) or Fire Suppression or Fire Alarm systems (if otherwise required to be submitted per Comm T. 61.30-3) for this project must all be registered with the Department of Commerce. **Structural components (i.e. trusses) do not have to be registered separately**)
- 5. That this registration does not affect the requirements to submit plans for plumbing systems, private sewage systems, swimming pools, elevators or other plans if applicable.
- 6. That upon completion of construction, this building will be in compliance with all applicable Wisconsin codes and standards.
- 7. That I am responsible for retaining a Wisconsin registered architect or professional engineer, or, in the case of HVAC and Fire Suppression, a registered designer, as supervising professional throughout the construction phase of this project, to perform periodic onsite observations and to file a compliance statement prior to occupancy.
- 8. That this project may be audited via plan review and/or inspection.

To qualify to be Registered in Lieu of Plan Review the volume of the <u>entire building</u> must be less than the volume indicated in Box 1.

Volume is defined as:

the actual cubic space enclosed within the outer surfaces of the outside or enclosing walls and contained between the outer surfaces of the roof and the underside of the lowest floor. The volume of structures without enclosing walls (canopies, roofed shelters and similar structures) will be computed by projecting imaginary vertical planes as the enclosing walls at the outer surface of the exterior supports or columns. For cantilevered structures with interior supports, the imaginary vertical planes will be projected at the farthest roof projection or overhang
